**\*Sao Paulo**

# The CAPP2 Study

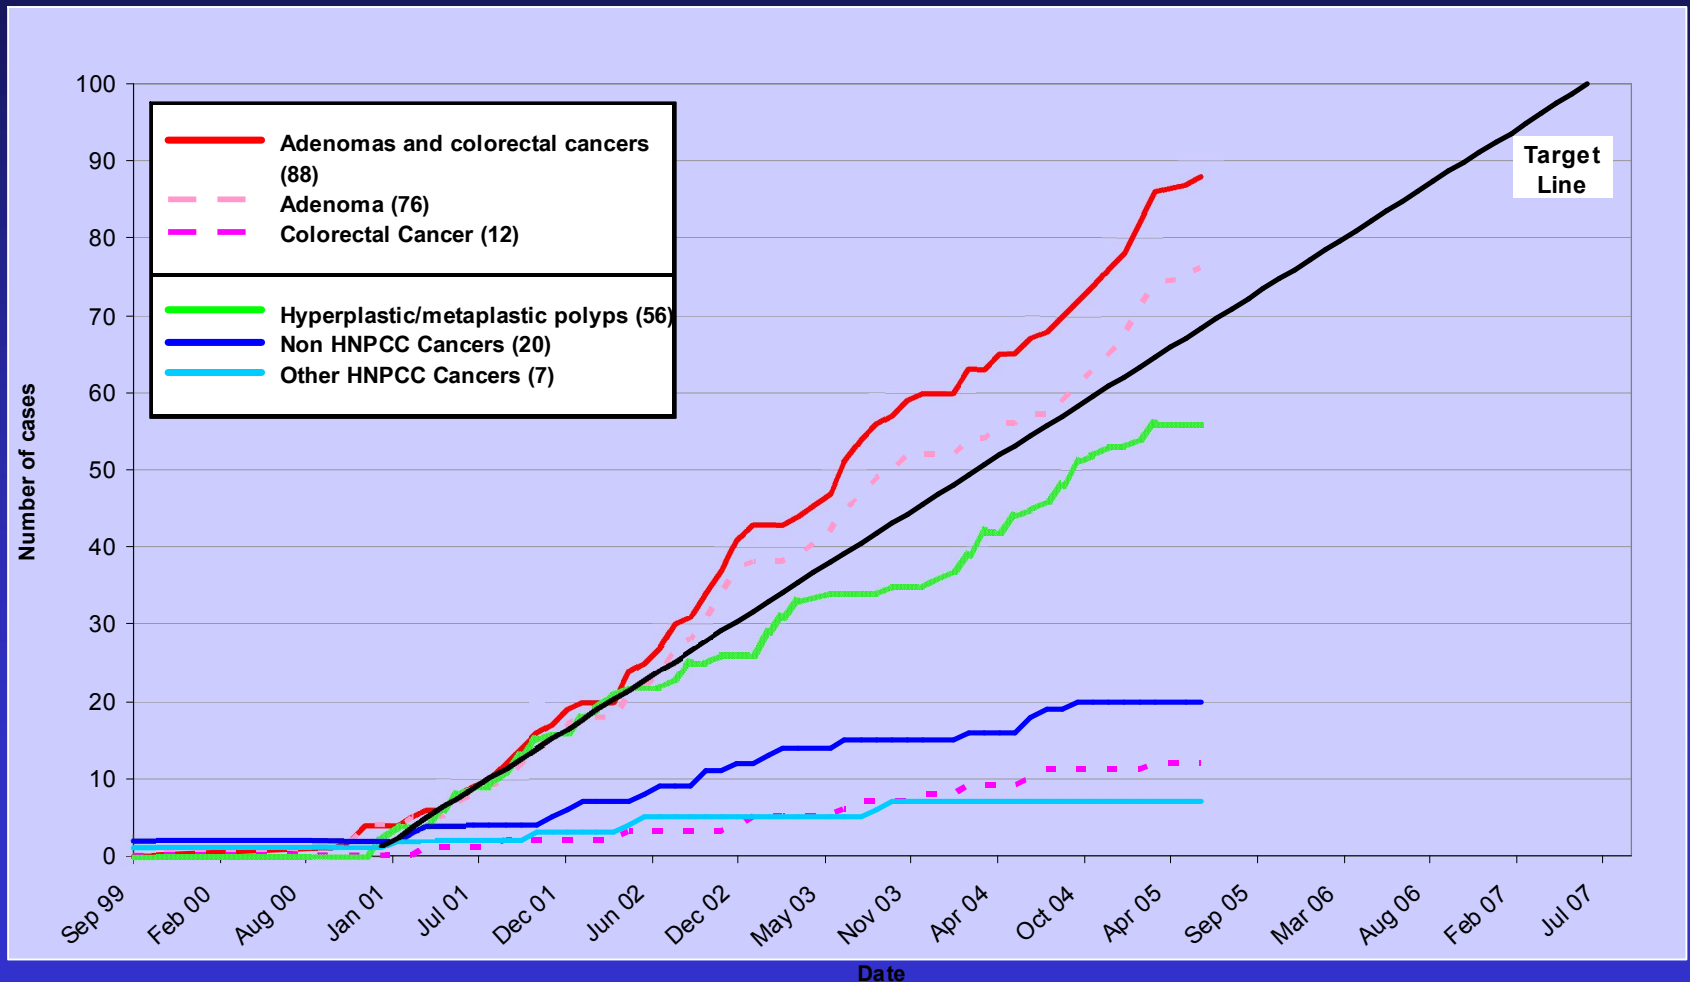

## Recruitment to 10 June 2005

# The CAPP2 Study

## Neoplasms recorded after entry June 2005

# CAPP2 Dates for your diary

- All randomisations where a 1 year endoscopy can be achieved should be done by end 2005.
- Code will be broken 1/5/2007
- Main paper will be ready for publication in 2007
- Authorship will be organised in 2005/6

# The Prevention Paradox

- Healthy people must be treated
- Trials take a long time
- Risk is almost unacceptable
- Any drug still under patent is unlikely to have enough safety data
- Any trial for a drug out of patent is hard to fund
- Over the counter preparations are ideal but vulnerable to “drop ins” by placebo group

# What should we test in CAPP3

**A dose inferiority analysis 600mg vs 75mg aspirin ?**

**Another factorial analysis of a nutritional supplement?**
